What is AmpliPhi Philosophy?

- Beautiful faces like many beautiful natural and man-made objects, have symmetry, harmony, balance and proportions.
- Greeks mathematicians discovered that to the human eye, the most beautiful proportion is 1 to 1.618. They called this proportion the Golden Ratio or the Phi Ratio.
- The more beautiful a face appears to the human eye, the more closely the facial proportions follow Phi Ratio. For example, the Phi Ratio appears over 20 times in Florence Colgate, Britain's most mathematically beautiful face.
- Dr. Bonakdar created AmpliPhi Filler Technique combining her vast aesthetic experience and artistic eye with the science of Phi proportions to BeautiPhi and YouthiPhi aging faces.
- By carefully measuring facial proportions, Dr. Bonakdar identifies the facial areas that have deviated from Phi Ratio and corrects these deviations to reestablish Phi beauty and youth.

$$\frac{a}{b} = \frac{a+b}{a} = 1.618 = \varphi$$

Florence Colgate, Britain's most mathematically beautiful face

Golden Ratio Proportions

Facial Aging and AmpliPhi Decade Dosing

- Facial aging starts in our 30's with soft tissue loss at a rate of one to two cc's per year. At first these changes are gradual and go unnoticed. However, the deterioration speeds up in each decade and becomes more pronounced.
- Facial aging effects surface skin and subsurface structures such as fat compartments, facial muscles and facial bones.
- Our brains subconsciously picks up facial aging as deviations from the golden ratio; while our eyes see facial aging as facial sinking, facial sagging, and facial wrinkling.
- Facial sinking otherwise known as deflation results from bone and deep soft tissue loss.
- Facial sagging or descent results from the overlying facial skin becoming too large for the underlying shrunken and deflated structures. Our eyes see a tired face with jowls and turkey neck.
- For every decade of life past the age of 30, there is a cumulative 10 to 20 cc's of facial volume loss or deflation and subsequent descent and deterioration.

AmpliPhi Decade Dosing Requires 5-10 cc's of Fillers for a 10 years younger transformation.

*I'm so happy with my AmpliPhi Treatment.
I couldn't have made a better decision. Everyone
says I look younger.
Julie - Age 50*

BeautiPhi • YouthiPhi • AmpliPhi

*My AmpliPhi Treatment was quick. It was easy.
I had no downtime. And the results are fabulous.
Gregri - Age 61*

My AmpliPhi results were fantastic. As soon as I saw myself in the mirror, I felt that I looked ten years younger. My family noticed that I look younger and much more confident.
Kimberly - Age 53

BeautiPhi • YouthiPhi • AmpliPhi

I like the confidence that my AmpliPhi Treatment has given me. People say that I look rested. They're not quite sure what I did but I'm getting a lot of compliments that I love.
Diana - Age 57

How Does AmpliPhi Technique Differ From Traditional Filler Treatment?

After decades of focusing her practice on facial aesthetics and performing thousands of filler treatments, Dr. Bonakdar created her proprietary AmpliPhi filler technique for full face rejuvenation and lifting. Dr. Bonakdar's aesthetic expertise and artistic genius are the reason for her beautiful AmpliPhi results which are unlike any seen with traditional filler treatments.

Are The Lifting Results Of AmpliPhi Technique Instant?

Yes. Your results are instant and improve during the first two weeks to look even better. You leave the office a younger version of yourself to enjoy your new look while fully resuming your daily activities.

How Long Is The Recovery From AmpliPhi Treatment?

There is no lifestyle altering downtime, no need for at home recovery or pain management. However, some individuals may feel slight tenderness, or have minor swelling or bruising for a few days.

How Is AmpliPhi Treatment Different From A Traditional Facelift?

Many individuals who think they need a surgical facelift and skin reduction, actually need volume correction which then naturally lifts the surrounding facial tissues. Traditional facelifts pull and tighten the skin transforming a sagging gaunt face into an unnatural tight gaunt face. Surgerized faces without volume correction appear flat and more two dimensional. Dr. Bonakdar corrects sinking, sagging and wrinkling with her AmpliPhi technique and restores the natural facial contours reestablishing a three dimensional younger version of you.

What Product Are Used For AmpliPhi Treatment?

Dr Bonakdar uses Juvederm collection of fillers including Juvederm Ultra, Juvederm Ultra Plus, Juvederm Volbella, Juvederm Vollure and Juvederm Voluma. These FDA approved fillers are made of Hyaluronic acids which naturally occur in our bodies. These fillers are used off-label to rejuvenate the entire face. They are extremely safe to use and are not known to cause any allergic reaction.

How Long Does AmpliPhi Treatment Last?

AmpliPhi results typically last from one to three years. Longevity of results vary depending on products used, your age, your rate of dermal filler metabolism, and your skin health at the time of your treatment. Dr Bonakdar recommends follow up visits every six months. However, touch up treatments may not be necessary for up to twenty-four months.

Can An AmpliPhi Treatment Be Reversed?

Yes. AmpliPhi Treatment results can be reversed if the need arises.

Can I Have My AmpliPhi Treatment Done The Same Day As My Consultation?

Yes. Because there is no downtime with AmpliPhi Treatment and there is no required pre-treatment preparation, your AmpliPhi Treatment can be done on the same day as your AmpliPhi Consultation. Most patients are excited about leaving the office looking younger than when they arrived and choose to have their treatment done right after their consultation.
